

**LED STREET PANEL**

**A new trend in street advertising: LED VIDEO PANELS**

With the introduction of outdoor high resolution models (in pitch 6 and 10mm) LED video displays can now be used in small formats with very short viewing distances, just like normal poster billboards, and are well visible during the day (5000 Nits). Power consumption is very low, life very long (over 10 years), and maintenance negligible and easy. Installation is also easy as it comes in one piece ready to be installed on the floor.

Ideal for pedestrian areas and narrow congested city streets...

The standard dimensions of such display is 2.3m (H) x 1.4 m (W) with a screen size of 160 x 128 mm, using 10mm pitch. We can also use 6mm pitch, but price would be quite expensive.
